**Makayla Garrett is 17 years old and was diagnosed with a genetic condition
called FAP (Familial Adenomatous Polyposis) at the age of 11. It is very fatal due
to the massive amounts of polyps that turn into cancer. Her sister passed away**

**November 5, 2013 from this disease. Makayla's polyps have spread to her
stomach and esophagus and are cancer. There is no known cure and we do not
have a lot of time with her. We are putting on this benefit to raise enough money
to send her and her family on vacation so they can enjoy their time together.**

ALL PROCEEDS WILL GO TO BENEFIT MAKAYLA AND HER FAMILY!
